

The Carpenter's Village: Mio and the Road to Steveston

In 1888 a carpenter named Kuno Gihei left this fishing village for an undeveloped settlement on Canada's Fraser River. He himself found little but hardship there. The neighbors who followed him into salmon fishing did not: within decades Mio's houses, its school and even its nickname, America Village, bore the marks of Steveston's money. This dossier follows both shores.

三尾・アメリカ村（和歌山県美浜町）

In this dossier

1. A history of the district (6 chapters, about 1700 words)
2. Timeline
3. Walking notes
4. Then and now: aerial photographs
5. How the ground was made
6. Disasters remembered
7. Sources (15) and further reading

Written in English from Japanese library sources — chiefly books digitised by the National Diet Library — and official records. Superscript numbers point to the numbered sources at the end, with page frames for the digitised books.

A fishing village with little land

Mio sits on the Kii Peninsula, on a stretch of the Hidaka District coast where mountains leave little flat ground and most of the district's harbors open southwest into the Kii Channel. A 1923 geography of the prefecture describes nearby Hii and Yura as deep, sheltered bays, if cramped, and the cape further southwest, Hinomisaki, as a place that gave passing ships' passengers trouble in rough water, marked by that time with a white, rotating lighthouse beam. An Edo-period survey of the same coast describes the villages of the old Mio estate, of which Mio itself was the namesake settlement, as living chiefly by fishing or by carrying cargo in all directions, with no want of a livelihood, in contrast to an inland neighboring estate whose people worked the land instead.²³

The wider district's own 1923 geography sums up Hidaka in a few lines: a place known for its farm produce, its timber and its paper, with cotton-spinning concentrated around the district town of Gobo, and otherwise given over to hills and to the sea. Mio itself, a modest fishing settlement, appears in the district's own 1910 statistical yearbook as one of thirteen towns and villages counted separately, alongside Gobo, Matsubara, Wada, Hiizaki and the rest, each with its own population return; the scanned page's exact figures for Mio are no longer legible, but its listing there confirms the village's place, however small, in the district's official bookkeeping a generation before its name became better known abroad than at home.³⁴

The carpenter who went to look for work

The district's own 1923 history sets down what happened next, and who came first. Three other Hidaka villagers had already gone abroad: a man from Yura to the United States and one from Yoshiwara to Hawaii, both in 1885, and one from a hamlet of Hiizaki to British Canada in 1887. Behind them, 'a bit later,' came Kuno Gihei of Mio, a carpenter by trade. He had heard that the Vancouver area of British Canada was promising for fishing, farming and manufacturing; he obtained a travel permit from Kanagawa Prefecture in September 1887 and sailed the following March. He meant to work in industry, but the place he reached, the gazetteer says, was still an undeveloped small settlement, nothing like what he had expected, and he spent more than twenty hard years there.¹

Kuno himself never made much of a success of it. He returned to Japan in December 1911 and died of illness in August 1916, at 63. Yet the same source is direct about his significance: whatever his own fortunes, it says, Mio villagers' later development in North America owed itself largely to him as its spark. The following year, 1889, several more men left, not as general laborers but specifically to fish: Tsuchiyama Torakichi, Mizuyabu Wakamatsu, Kuroyama Yonekichi, Yamamoto Fukumatsu, Yoshida Kamekichi, Osawa Yaichi, Ueda Itaro and others. The waters were rich, the district history notes, but their boats and gear were not equal to it at first; they adapted, did well, and the reports that reached Mio each year drew more of its people after them.¹

Mio's pattern was not quite typical of its own district, which is part of what makes it distinct. The same 1923 history records other Hidaka villages sending their own early travelers to very different places over the same years: groups from two nearby farming villages to the United States from 1892 to work the land, one man from Nishi-Uchihara to Australia in 1893, another from Nanbu who had already failed at two businesses in Wakayama City and become a Christian minister in Hiroshima before he finally obtained a travel permit there and left for America too. Almost every case the gazetteer records begins the same way, one villager's report of success or failure reaching home and either drawing others after him or warning them off; Mio's story is simply the case, among a dozen such stories from this one stretch of coast, where the following was largest and the destination, Canada's Pacific coast fishery, most consistently the same.¹

Steveston, and the war that scattered it

The place Kuno Gihei and his neighbors were making for is known today as Steveston, a fishing settlement at the mouth of the Fraser River, now part of Richmond, British Columbia. The Canadian side's own account of the connection puts more than 2,000 people of Mio origin living in Canada by 1940, and states that Steveston once held the largest Japanese population

anywhere in the country. Fishing bred its own trades alongside it: one Steveston boatworks built by the Kishi family in the 1930s turned out 24- and 26-foot wooden gillnetters, sometimes four at a time, and kept building and repairing boats there into the late 1960s; its last wooden gillnetter, the Silver Ann, was launched in 1969, long after most of the yard's original Japanese Canadian founders had gone.⁸¹³

The pace of the work bred its own speech, too. Fishermen coordinating a salmon run, with no time to be diplomatic, developed what has since been called the Steveston, or Kishu, dialect, a working shorthand remembered today in terms like 'ajiro' for a good fishing spot and 'gaina' as an exclamation of surprise, understood on the Fraser River by people whose grandparents had never left Wakayama.¹⁴

None of this went unopposed by other British Columbians. Through the 1900s to 1920s, provincial and federal fisheries policy, often argued in the name of conserving salmon stocks, steadily reduced the number of commercial licenses granted to Japanese Canadian fishers and placed legal restrictions on their boats and gear; not until a 1928 Supreme Court of Canada ruling, holding that the province could not favor some British subjects over others in issuing licenses, did the courts push back against the practice. Steveston's Japanese Canadian community, in which Mio families were so heavily represented, absorbed this pressure for two full decades before the war made it far worse.¹²

The Pacific war broke the pattern for good. From 1942 the Canadian government removed everyone of Japanese descent from a zone within a hundred miles of the British Columbia coast, roughly 22,000 people in all, more than half of them Canadian-born; homes, cars and fishing boats were left behind and later sold by the government without their owners' consent. Only in 1949, four years after Japan's surrender, were Japanese Canadians permitted back onto the coast and given the same rights, including the vote, as other citizens.⁹

What the money built

Mio itself changed with the money that came back. By 1909 emigrants in America had contributed more than 10,000 yen, a considerable sum, toward building the village's elementary school at Naka-no-hama, remembered in the district's own history as a memorial to their success abroad. Houses built in a recognizably North American style went up too, among them the one that stands today as the Canada Museum; there were enough of them that Mio had, by the 1920s, already earned in print the nickname a later reference work still uses: America Village, a fishing settlement, it notes, that sent out an unusual number of overseas emigrants and kept, as a result, its own distinct customs.¹¹⁰

Kuno Gihei's own return to Japan in 1911 was not an isolated case. The house that is now the Canada Museum, a hipped-roof building with painted siding and rooms that mix Japanese and Western styles, was built in the 1930s by the Nakatsu family, who had themselves worked in Vancouver and come home; the local newspaper that covered its registration as a cultural property describes it as exemplifying a wider pattern in which returning emigrants reshaped the village's own architecture, and with it its character.¹⁷

Reading the ground today

The clearest place to see this history today is the Canada Museum, in a two-story wooden house with a hipped, green-tiled roof and white-painted siding, built around 1934 by the Nakatsu family, who had themselves worked in Vancouver, and later passed to the Noda family. Mihama Town took the building over in 2017, opened it as a museum in July 2018, and had it registered as a national tangible cultural property in 2019. Its adjoining Canada Garden holds a totem pole made in Canada and, since 2022, a bronze statue of Kuno Gihei himself, donated by his own great-grandson on a visit from Vancouver. Alongside them, and not really about Canada at all, sits an old Fresnel lens from the second generation of the Hinomisaki lighthouse down the coast, a reminder that the garden gathers up the village's whole seafaring past, not only its Pacific-crossing half.⁵⁶⁷

A short walk away stands Mio's former elementary school, closed as a school but still in use: a local organization now trains village children to explain the area's history in English, a direct echo of the traffic that once ran the other way, from this coast to the Fraser River. One room of the Canada Museum itself works the same way in miniature, kept as a small café where a visitor can sit with coffee among furnishings meant to recall a returnee's bygone life in Canada. The 1923 district history's account of Kuno Gihei's own hard years, set beside the neighbors who did better than he did, is worth remembering on that walk: the museum and the statue mark a success that was, for its first mover, no success at all.¹⁵

A village measured against its own past

Mihama Town, of which Mio is now a part, counted 8,667 people at its founding in 1954; a compiled reference work puts its population at 6,867 in 2020, a decline of roughly a fifth over two-thirds of a century, in line with the slow shrinking of small fishing towns across rural Japan. Mio's own experience of that decline has run alongside a second, smaller current in the other direction: a magazine survey of the village's revival efforts reports that agreements to rent or buy empty houses in the area were roughly three times more common in 2020 than three years before, crediting the pull of the Canada Museum, its guesthouse and diving-and-marine-sports business, and the storyteller program, alongside the plain appeal of a small coastal life. Whether that current will do more than slow the larger one is not yet a question this dossier's sources can answer; what they can confirm is that the village's identity, well over a century after Kuno Gihei sailed, is still built as much around Steveston as around the Kii coast it sits on.^{10 11 15}

Timeline

Edo period	A domain survey of the coast describes Mio-estate villages living chiefly by fishing and coastal shipping. ²
1885	The first Hidaka District emigration pioneers leave, for the US mainland and for Hawaii. ¹
1887-1888	Kuno Gihei of Mio, a carpenter, obtains a travel permit and sails for the Vancouver area of British Canada. ¹
1889	Several more Mio men follow Kuno, specifically to fish; word of their success draws more each year. ¹
1895	A lighthouse is established at Hinomisaki, the cape near Mio. ¹⁰
1909	Mio emigrants in America fund construction of the village's elementary school, over 10,000 yen. ¹
1916	Kuno Gihei dies in Japan at 63, five years after returning from Canada. ¹
1940	More than 2,000 people of Mio origin are living in Canada, many in the Steveston fishing settlement. ⁸
1942-1949	Japanese Canadians are removed from the British Columbia coast; only in 1949 are they permitted to return with full citizenship rights. ⁹
1954	Mio, Wada and Matsubara villages merge to form Mihama Town. ¹⁰
c. 1934	A Mio family returned from Vancouver builds the house that later becomes the Canada Museum. ⁶
2018-2019	Mihama Town opens the Canada Museum in the restored house (2018) and has it registered as a national tangible cultural property (2019). ⁶⁷
2022	Kuno Gihei's great-grandson donates a bronze statue of him to the museum's Canada Garden. ⁵

Walking notes

Places to stand and look, in walking order. Straight-line distances only; check today's access and opening before you go.

- 1 Canada Museum (former Noda residence)** カナダミュージアム（旧野田家住宅）. A 1930s house built by the Nakatsu family, Vancouver returnees, mixing Japanese and Western styles; a national tangible cultural property since 2019, now telling Mio's own emigration story.⁵⁶⁷
- 2 Canada Garden** カナダガーデン. Beside the museum: a Canadian-made totem pole, a 2022 bronze statue of Kuno Gihei donated by his great-grandson, and a Fresnel lens from the Hinomisaki lighthouse's second generation.⁵
- 3 Former Mio Elementary School** 旧三尾小学校. Closed as a school; its 1909 building was funded partly by Mio emigrants in America, and the site now hosts a program training local children to guide visitors in English.¹⁵
- 4 Mio harbor** 三尾の漁港. The working waterfront of a village whose economy, an Edo-period survey already noted, rested on fishing and coastal shipping long before Canada entered the picture.²
- 5 Hinomisaki** 日ノ御埼. The cape southwest of the village, marked by a lighthouse since the 1890s; a rough stretch of water for passing ships, and the source of the lens now displayed in the Canada Garden.³¹⁰

The same ground, 1961–1969 and 2019

1961–1969 aerial photograph — GSI Tiles *ort_old10*, cropped and annotated by Japan Time Atlas. North is up; the frame is identical in both images.

2019 annual orthophoto — GSI Tiles *nendophoto2019*, cropped and annotated by Japan Time Atlas. Capture dates within a mosaic can differ from place to place.

How to compare. Anchor on features that rarely move — river banks, rail lines, shrine and temple grounds, main roads — then look for what changed around them. Differences in tone come from film, camera and season, not from the land itself.

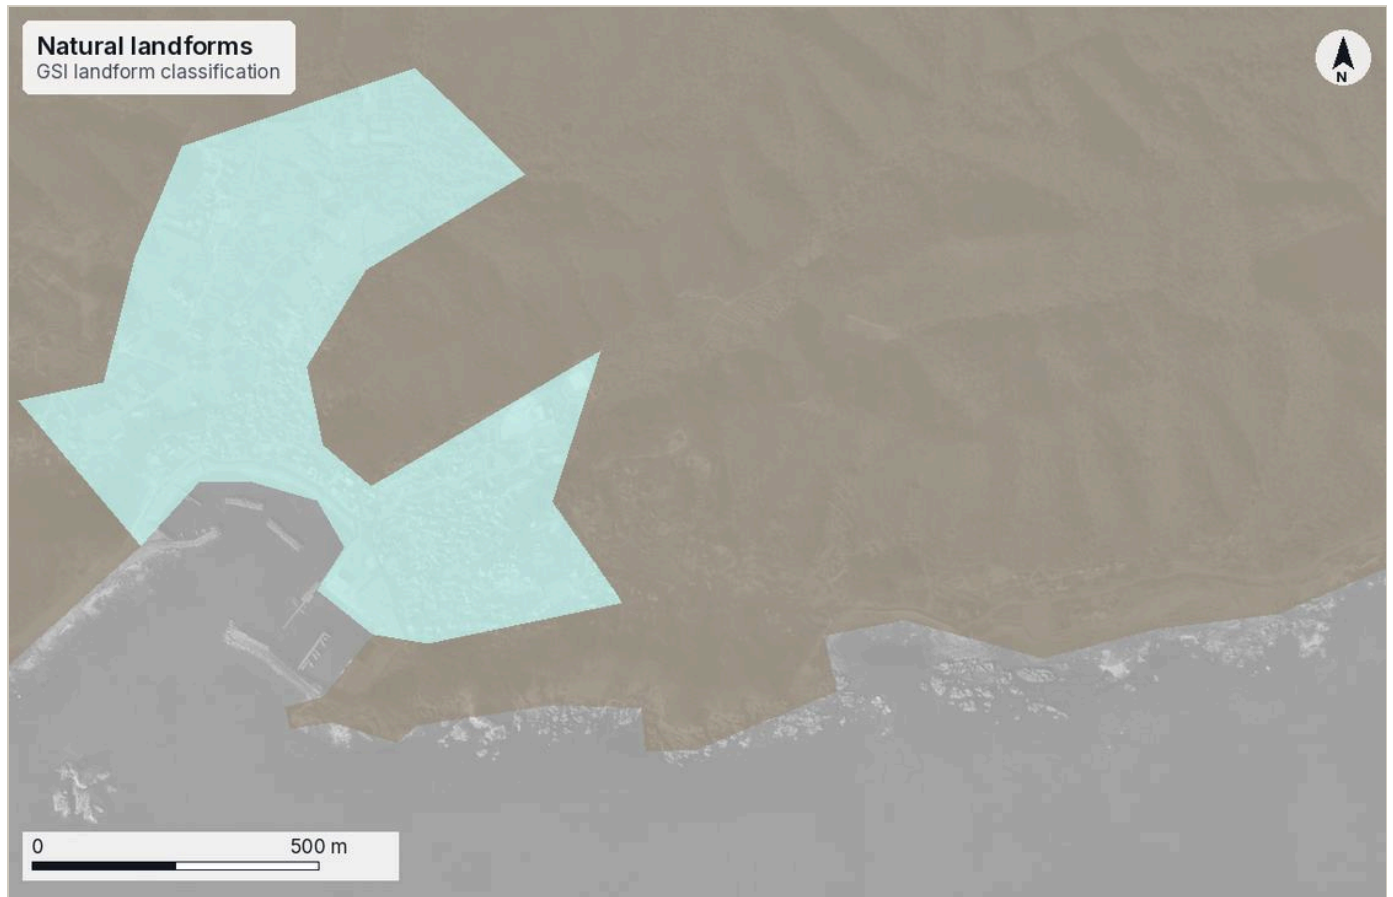

The decades in between

Every further GSI series that covers the same frame, oldest first. Each series is a compilation: photographs within one series were taken on different dates, which is why seams and changes of tone can appear inside a frame.

1974-1978 · GSI Tiles *gazo1*, processed

Rivers, shorelines and terraces

Natural landforms as classified by GSI, over a recent aerial photograph in gray. Dark blue outlines mark former river channels.

 Mountains 58%

 Lowland 13%

GSI has no detailed landform survey for this frame, so the map uses GSI's regional classification (compiled for zoom levels 9–13). It shows the broad landform only; former river channels and man-made ground are not mapped at that scale.

What the main landforms mean

Mountains (58%). Terrain of high ridges and valleys. Watch for slope disasters.

Lowland (13%). Flat land built from sand, gravel and mud laid down by rivers or the sea. River flooding, storm surge and liquefaction; shakes easily in earthquakes.

Descriptions translated and condensed from GSI's landform-classification legend. They describe tendencies of each landform type, not the condition of any individual plot.

Fill, reclamation and the fields beneath the town

Hatching: man-made ground as classified by GSI. Teal outlines: former sea, river or pond. Dark blue outlines: former river channels.

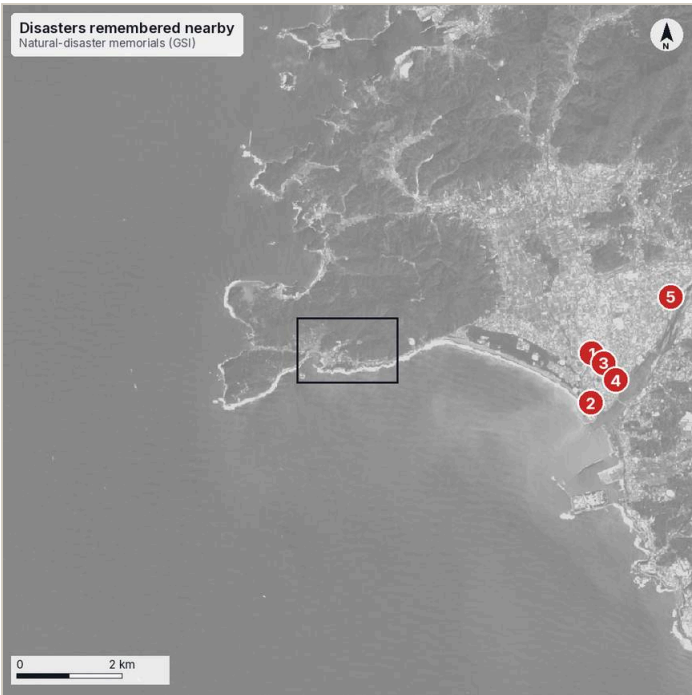

Man-made ground

No man-made ground mapped in this frame.

Meiji-era lowland

GSI has not traced Meiji-era lowland for this frame.

Memorials to natural disasters nearby

Numbered memorials; the black rectangle is the study area of this brief. Frame 16 km across.

Fewer than three memorials stand within 3 km of the study area, so the nearest ones within 8 km are listed.

Memorial	Disaster	Erected	Distance
1 Flood-level marker for the 1953 Kishu flood 水位標	Great Kishu flood (18 Jul 1953) · flood	1958	5.8 km
2 Stone record of the 1854 Ansei Nankai tsunami 津浪之紀事	Ansei Nankai earthquake (24 Dec 1854) · earthquake / tsunami	1862	5.9 km
3 Monument of Murata Yoshinari, recalling the 1889 Hidaka River flood 村田美成の碑	Great Kii Peninsula flood (19–20 Aug 1889) · flood	1894	6.1 km
4 Monument to the 1953 Kishu flood in Gobo 水害之碑	Great Kishu flood (18 Jul 1953) · flood	1954	6.4 km
5 Monument to the restoration of Fujii's farmland after the 1953 Kishu flood 藤井の耕地復旧記念碑	Great Kishu flood (18 Jul 1953) · flood	1962	7.7 km

What the memorials record

1. **Flood-level marker for the 1953 Kishu flood.** The heavy rain of 18 July 1953 broke the embankments; the torrent destroyed hundreds of houses in an instant and laid waste more than 600 hectares of farmland. The marker records the flood level so that the disaster is not forgotten, though it has been moved since it was set up and may no longer show the true level.
2. **Stone record of the 1854 Ansei Nankai tsunami.** The Ansei Nankai earthquake of 24 December 1854 brought a tsunami to Mihama, and people who fled onto the river in boats were sunk by it. The inscription teaches that great earthquakes bring tsunamis and that people should take refuge on the higher ground of the great pine grove.
3. **Monument of Murata Yoshinari, recalling the 1889 Hidaka River flood.** Heavy rain on 19–20 August 1889 broke the embankments of the Hidaka River, and the torrent swept away many houses, people and livestock. The flood is said to have killed 219 people.
4. **Monument to the 1953 Kishu flood in Gobo.** Heavy rain of up to 600 mm on 18 July 1953 made the Hidaka River overflow. Across Gobo City 26 people died, 100 went missing and about 3,000 were injured; an estimated 4,000 houses were flooded above floor level, 365 of them swept away, and recovery took several years. The monument urges future generations never to lose their wariness of nature.
5. **Monument to the restoration of Fujii's farmland after the 1953 Kishu flood.** Heavy rain that had fallen since the night before struck all of Kishu on 18 July 1953, hitting the Arida and Hidaka river basins hardest. Landslides filled valleys, embankments broke, torrents swept away people and houses, and farmland was badly devastated. The monument first stood by the prefectural road at Fujii and now stands on the Gobo–Miyama road at Yoshida.

Source: GSI Natural Disaster Memorials (自然災害伝承碑). English names and notes are Japan Time Atlas translations and summaries of GSI's Japanese descriptions; the memorials' own inscriptions may say more. "Erected" is the year GSI records for the monument.

Where a Deep Research request would go next

- **Household-level emigration and remittance records for named Mio families** — Mihama Town's local-history archive and the Japan Overseas Migration Museum (JICA Yokohama). Consult *美浜町史* and the underlying field notes of the 1953 Fukutake surveys (S. Fukutake, *アメリカ村* and *海外移民が母村に及ぼした影響*) for household-by-household data.
- **Canadian-side immigration, naturalization and fishing-license records for Mio-born residents of Steveston** — Library and Archives Canada, and the Nikkei National Museum & Cultural Centre (Burnaby, BC). Search Library and Archives Canada's immigration records by port and year; the Nikkei museum holds community and fishing-license collections.
- **Records of Japanese Canadian internment specifically affecting Mio-origin families, and any subsequent redress claims** — Landscapes of Injustice project archive (University of Victoria) and the Nikkei National Museum. Search the Landscapes of Injustice online database by family name or by Steveston address.
- **The full run of the Gulf of Georgia Cannery's and Steveston Museum's photographic and oral-history collections on Mio-origin families** — Gulf of Georgia Cannery National Historic Site and Richmond Museum, British Columbia. Contact the cannery's archives directly; many oral histories are catalogued but not yet online.
- **A fuller reading of the classical 紀伊続風土記 entry for Mio itself (the frame read here covers the wider 'Mio estate' rather than the village in isolation)** — National Diet Library Digital Collections, pid 765518, and the Wakayama Prefectural Library's local-history room. Full-text search the same pid for 三尾浦 and 三尾荘 across the whole Hidaka-gun volumes (frames 291-380) and cross-check with a modern annotated edition.

Caveats

- Kuno Gihei's birth year is not stated directly in the source used here; only his death (August 1916, at age 63) is given, so no birth year is asserted in this dossier.
- The Edo-period survey cited for the area's fishing economy describes the medieval 'Mio estate' and several of its constituent hamlets by name; it does not name Mio-ura itself in the specific passage read, so the connection to the village is presented here as reasonably inferred rather than explicitly stated by that source.
- The Hinomisaki lighthouse's establishment is dated 1895 by Kotobank (citing Britannica); the Fresnel lens in the Canada Garden is described by its display as coming from the lighthouse's second generation.
- Automated summaries of Mio-related web pages twice produced conflicting or garbled personal names for individuals connected to specific historic buildings; where a name could not be independently confirmed, this dossier omits it rather than risk a wrong romanization.
- The official Mihama Town website (town.mihama.wakayama.jp) could not be reached this session; municipal-history facts instead rely on a compiled reference source (Kotobank/Britannica) that names its own underlying references.

Digitised books are cited, not reproduced: the page frames let you open the same page in the NDL Digital Collections. Aerial photographs, landform and memorial data: GSI, processed by Japan Time Atlas. This experimental edition was checked against its cited sources on 2026-09-28 but has not had independent fact-checking.
